Technologies

- TypeScript, Node.js
- Python, Django Rest Framework
- React, Redux, MaterialUI, TailwindCSS, Next.js
- AWS (Lambda, DynamoDB, SQS, S3, CloudWatch, AppSync) , GCP
- GraphQL, Rest API
- vitest, React Testing Library
- integrating external providers such as Precisely, ProducerFlow, Stripe, HubSpot and more

Language

Polish, native

English, C1

Certificates

Sept 2024
AWS Certified Cloud Practitioner

June 2025
AI Devs 3

In progress
GCP Associate Cloud Engineer

Education

2019-2023
KIELCE UNIVERSITY OF TECHNOLOGY
Computer Science - Engineer
Specialization: Information Systems

Kinga Nowakowska

SOFTWARE ENGINEER

Experience

May 2023 – currently
Software Engineer

CoverTree, USA startup

Developing software products in USA insurance industry from the gathering requirements phase to release phase. Providing **high quality** of products and services by taking active part in every step of engineering process. Engaging in **on-call** activities to handle users' service requests and support them in doing good business. **Sharing knowledge** with other team members. Taking part in production-related duties such as correcting data, triggering actions and monitoring services. **Consulting** other teams with technical and business matters.

Took over responsibilities related to **releasing** features to **production** environment. Took ownership of integrating our system with external provider (ProducerFlow) what included **gathering requirements**, designing data structure, designing **event-driven system**, planing the implementation, implementing solution and **communication** with external provider representatives.

Took part in massive initiatives such as QA strategy introducing **unit and integration tests** in all our systems to improve systems stability and reliability. Another initiative was FE Refactor with refactoring architecture and code of FE applications to make sure they are easily extendable and maintainable.

Adopted the role of **informal leader** as the team needed it to improve developer-experience and efficient team work. Reacted **flexible** according to current company's needs.

Transition Technologies - Advanced Solutions

Design and development of software in the chemical and production industry. I was responsible for creating frontend pages from scratch using React and preparing **API in Django**. Dealing with asynchronous tasks in Python, web sockets in JavaScript or carrying on integration with external systems like SAP or EDS was my daily field of work. Participated in solving problems with handling events from external scanners or parsing HMI graphics into SVG.

Jul 2021 - Nov 2023
Frontend Developer

Side Projects

2025 - currently

[Busola UI](#)
[Busola Server](#)

Busola

Website and e-learning web application for exam preparation in Geography. Integrated with external CMS and Resend. Created from scratch. Production release planned for 2026 with Slack and external online shop integration. Technology stack: Next.js, TypeScript, Node.js, Fastify, Contentful, Prisma.

Soft Skills

- leadership
- effective prioritisation and work management
- being open to work cooperatively on teamwork disfunctions
- determined and consistent
- growth-oriented attitude
- good communication skills
- high emotional intelligence
